

DMEMSMD EMS Protocols Updates January 2014

1. Adenosine for pediatrics – consistent with PALS
 - a. 0.1 mg/kg with max of 6 (first dose)
 - b. 0.2 mg/kg with max of 12 (second dose)
2. Morphine
 - a. 5 and 5, call in after 10
3. Peds intubation (6030)
 - a. Grey box – 1st bullet states no intubation
 - b. Move bullet down and add “unless other alternatives, i.e. supraglottic airway, BVM, are unsuccessful”
4. Dextrose
 - a. Remove “50%” reference from title in protocol
5. Adult Cardiac Arrest Protocol (2000)
 - a. Use same language from 6030 discussing transporting patients in arrest
